- Over 3000 Databases (DBs)			anywhere

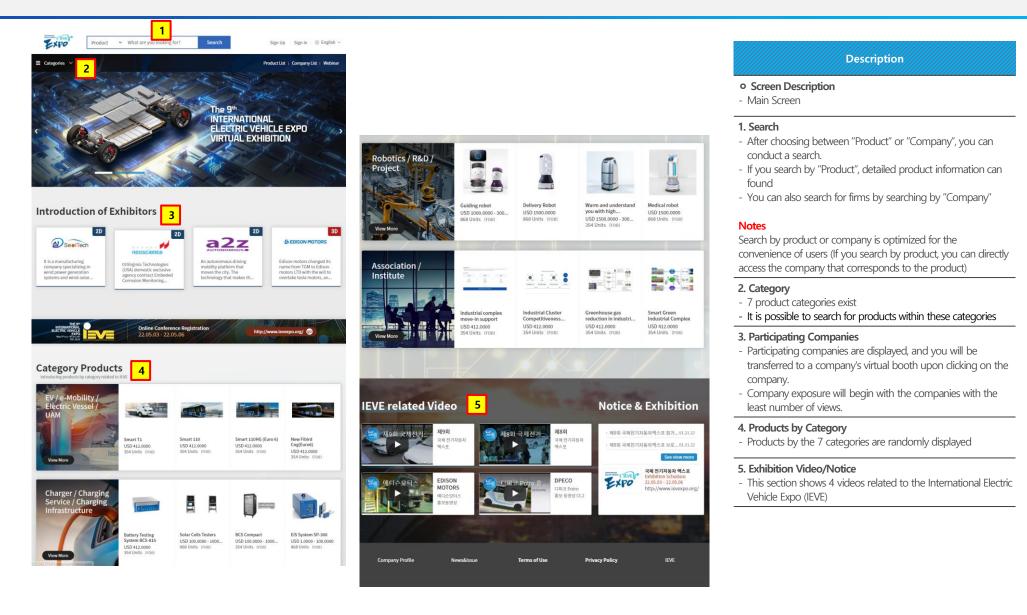

By participating, you will be among **1 million** businesses that will gain IEVE's assistance in marketing and PR

# The 9th International Electric Vehicle Expo Virtual Exhibition Features and Overview

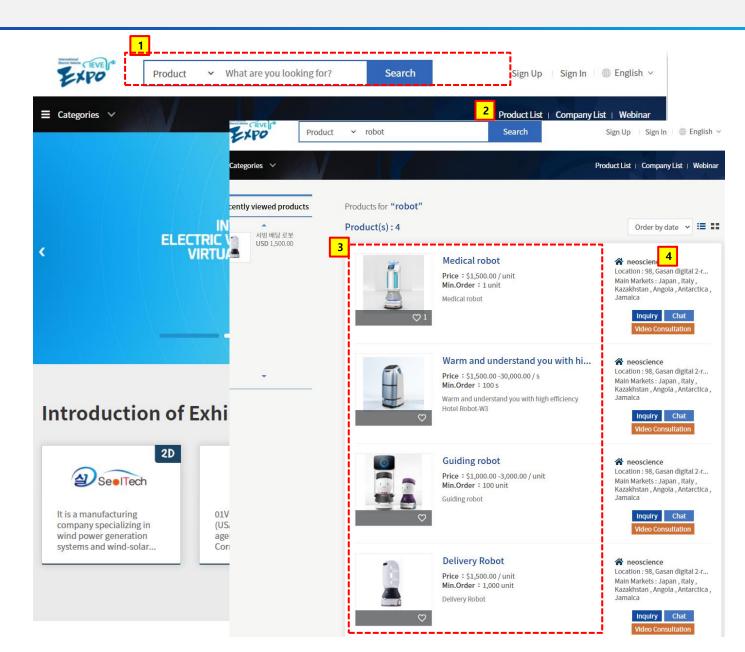

### Main Points

- 1) After the emergence of COVID-19, IEVE promptly held virtual exhibitions to revitalize the EV industry and expand sales channels for small and medium-sized enterprises (SMEs).
- 2 There are many other virtual exhibition models in Korea, but they usually go no further than hosting online events.
- 3 However, the 9th International Electric Vehicle Expo's virtual exhibition aims to create actual business partnerships and transactions.
- 4 Participating firms can freely modify and update virtual booths; and information necessary for exporting can be displayed first.
- (5) Buyers and visitors can search for desired products or companies, meet, and inquire (chat) with them in real time
- 6 IEVE's virtual exhibition will be a fast-paced, web page-based event;. It will offer easy access to the event's virtual format, without the need for the separate installation of specialized equipment or programs.
- (7) As for general booths (2D), small and medium-sized companies can use these as web and as e-trading platforms that are focused on product sales.
- As for special booths (3D), a certain number of companies in specific institutions and/or associations can create these in the form of pavilions.

# 2. Main Screen (Configuration)

## 2. Main Screen (Virtual Booth Navigation – By Product)

#### Description

#### Screen Description
